REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

While Andrews shows a conveyor system comprising a frame, a conveyor bed, an endless conveyor belt, and a belt drive unit with a plurality of belt pulleys engaged with belt drive means within an enclosed housing having an opening therein through which the belt passes as required by the independent claims, it does not have a UV irradiation light source interposed in the path of travel of the belt through the housing for disinfecting the belt and the interior of the housing as the belt passes therethrough as required by the independent claims. Furthermore, while Parnell, Sarukawa et al., Iwata et al., and Schweitzer all teach that conveyor belt within a housing may be exposed to an UV irradiation light source interposed in the path of the belt, none of the references teach placing such a light source in the path of travel of the belt through an enclosed housing having an opening therein through which the belt passes and containing a belt drive means and a plurality of belt pulleys engaged with the belt and the drive means for receiving the conveyor belt from one of the upper and lower flight paths of the belt for disinfecting the belt and the interior of the housing as the belt passes therethrough. Therefore, while it may have been obvious to one of ordinary skill in the art at the time of the invention to provide an UV irradiation light source in the conveyor of Andrews, it would not have been obvious to provide such a light source in the enclosed drive housing as required by the independent claims and thus the case is in condition for allowance.
